

“We can see our customers’ needs in real-time and then prioritise available capacity”

Anica Sonnerstig

“We have many different customers and they all place high demands on us. One of the industries that is always at the leading edge with its demands is the automotive industry. We currently have several large automotive customers including Volvo Powertrain and Scania. We use PipeChain to meet their high demands for

service. We came into contact with PipeChain when Volvo Powertrain started their PipeChain project several years ago. We have been part of the project since its beginning and clearly have seen the advantages of PipeChain.

PipeChain gives me the possibility to see, in real time, exactly what and how much each customer needs. In this way I can prioritise available capacity correctly and ensure that each customer gets the correct deliveries without complicated administration.

We help our customers to keep their stock levels down while using our own available capacity in the best way and avoid building up our own stocks.

This project has really shown that there are advantages to be gained for both the customer and the supplier by working with supplier replenishment in PipeChain. Naturally, we hope that even more of our customers will discover the advantages of PipeChain so we can become even more efficient and give even better service.”

Anica Sonnerstig, Logistics Manager, Metallfabriken Ljunghäll

Ljunghäll is one of Europe’s leading die-casting works. Ljunghäll’s sales amount to 825 MSEK per year. They produce technically advanced die-cast goods to demanding customers from many different industries with the help of their 640 employees. The head office is in Södra Vi, approximately 10 km. from Vimmerby, Sweden.

PipeChain develops systems that manage the supply of goods between companies. Using PipeChain, customers, producers and suppliers can connect to each other in shorter or longer chains and together create an even flow of goods. Each part of the chain can quickly exchange information and the integrated monitoring and alarm features enable companies to hold a minimum inventory while increasing service levels.

PipeChain together with **MA-system** forms a group of companies with around 100 employees working within logistics. PipeChain customers are amongst others: V&S Absolut Spirits, Volvo Powertrain, SCA Packaging and Ericsson.
