Release Notes
PipeChain Version 2021

2021-07-06
DEV7203 Force MACom transaction into error (#542)
Support for receiving converters to force transaction into error with an error cause message. This is applicable for all MACom transaction types and is triggered by the converter by setting Head Element ForceError.

2021-07-02
Automatically printout delivery notes and labels separate. (#580) (#581)
This is corrected by changing the selected properties handling the functionality, to make sure that the customer can choose if they want to automatically print both transport unit label and delivery note or only one of them (or none) when handling despatches. Changed for all three similar selected properties (113, 124 and 125).

2021-06-28
DEV7195 - Ny type of MACom-channel: OAuth CCF
New BEAst message OrderReceipt and WasteCode

2021-06-23
New and clear JRE and OpenWebStart installation instruction page. (#575)
- Final menu CSS fixes + new Java WebStart view.
- New Java Client OpenWebStart installation view.

Web Shop – Selected Property 10013 governs now empty Basket Line Id behavior. (#577)

Proper hiding of Site Group Selector (#574)

2021-06-21
Widths of menu bar adjusted to hide choices on smaller screens. (#572)

2021-06-18
Adjusted new look of site picker to work with modern browsers (#569)
Updated for Edge, Chrome, Internet Explorer, Firefox, and Safari. (#569)

2021-06-17
Customer Delivery Agreement - Fixed inconsistent OK remarks (#568)

VMI - Late suggestions transport strategy (#567)

2021-06-11
Confusing Lock-icon in Delivery Planner (#563)
Removed the Lock Icon as it could cause confusion with the exact same lock-icon on the "Lock" button that showed the would-be status after the action.

2021-06-10
PW12: Don't send Delivery Note Id if using dummy WaybillNo (#562)

2021-06-08
Correction on null exception in SessionContainer
Happens when you try to log in and don't have any customers available for the user, nor any suppliers. The message received (apparently in web only) is "Login failed. Could not connect to the server. null." This issue has now been corrected.

Fixed error of "Invalid Column Name ConversationId" when accepting Rental Report. (#557)

Outbound Delivery Agreement product browser gets no list (#556)

This is due to an internal exception when Selected Property 84 ENABLE_USE_OF_DELIVUNITQTY_AS_MULTIUNITQTY is not set up

Single customer in database auto-selects that customer. (#555)
Update on the previous development that takes the fact that you can have both a customer and a supplier selected at the same time in certain cases.

Outbound Delivery Agreement fields not updated (#553)
Customer name and type does not change when selecting a new customer, when creating/copying a new delivery agreement

2021-06-07
Product change in CS40 Purchase Orders transaction is prohibited
Added check If you only have one customer, that customer is treated as selected, even if it is not selected in the list. and Supplier Product Id differs between CS40 and database (#552)
If a CS40 tries to change Product Id or Supplier Product the transaction is now set to Processed Error-status with a relevant error message as change product identities are not allowed as an update.

Single customer in database auto-selects that customer. (#551) (#555)
When there is only one customer in the database, and you login as user of type Own, the platform will assume that very customer is selected. I.e., if you only have one customer, that customer is treated as selected, even if it is not selected in the list.
This causes a problem where the screen is both a supplier and customer screen, and you want to show supplier data, but the data is filtered by customer also - even if no customer is selected.
Vice versa occurs if only one supplier exists in the database.

2021-06-04
Increased the year span of the date picker (#546)
The web calendar/date picker displayed dropdown span is now increased to the span off -4 to +3 years (total 8) to be inside the bounds of any operational data.

Updated the Analyzer-script for 2021R1 (non-OLAP part) (#545)

2021-06-02
Skip all jars in TLD scan (#541)
When deploying the webapp to a local Tomcat server all .jar files are scanned for TLDs. Since we don't use any TLDs we can disable the scan in order to speed up the deploy time.

Support for Data Matrix (#289) (#522) (#540)
Implemented Data Matrix functionality for printouts
Added support for SSCC as Data Matrix

Fixed Confirm Order dialog not closing when confirming order (#539)

DEV7165 - Add Delivery Date related to Terms of Delivery in CS05 (#529)
Added Delivery Date to Order Response.
Corrected a couple minor issues found in TimeWorkingWithHelper

2021-05-31
Fix java.lang.UnsatisfiedLinkError: Can't find dependent libraries (#534)
Lib path is missing when using Java 11 and Procrun in order to run PipeChain server as a Windows service.
Apache Commons Daemon binary has also been updated to the latest version: 1.2.4.0

Improved error message when reception schedule is missing (#533)
This error occurs when trying to calculate a new reception time from shipment time, in transactions as in CS40 Purchase Orders transaction for example.

2021-05-28
Ensure new single number build format is working (#530)
Displayed; Logged, Generated from Database Wizard
Data exchange is not affected by this, uses legacy build no

2021-05-27
CS43 Partner Agreement address update behavior change (#528)
CS43 processing will now update existing addresses of partners instead of creating a new one.
The processing will only update address info for fields that appear in the transaction

2021-05-26
Fixed text containing ?? being replaced with JQuery string. (#523)

Add autocomplete to username and current password to login view in web client (#519)

PW40 Web Purchase Order crashes (PW40) (#515) (#518)
An error in logging caused transaction crash when processing. This error is now corrected.

2021-05-25
Introduced Selected Property 88 MATCH_REMAINDER_ROW_ZERO
Introduced the Selected Property 88 that makes PW02 Inbound Order Response and PW03 Inbound Despatch Advice explicitly search the database with Remainder Row = 0 when Remainder Row is zero in transaction in transaction (i.e., missing). Default is false for legacy reasons but could lead to selection of the wrong order line.

Web - Disabled the Model Positioning (#516) (#517)
Disabled the Model Positioning in the web, as it is not working. Also corrected a error that could prevent Inbound Finished Delivery screen from working.

Fix for Mail Manager (#514)
Error about Mail Manager will no longer appear when trying to change password of a user without a Mail Manager set up.

Restore action on Pending Approval Order does not handle split qty correctly (#511)
- Added web/custom files to gitignore
- Restore on Pending Approval Order does not handle split qty correctly
- Also corrected PW01/MP01 faulty orderline selection (all orderlines was not selected).

2021-05-21
DEV7194 New PW12 Transport Unit Label **Environmental Report transaction**
Waste Code added to Despatch Invoice Rows
New table EcoData
ECO data (Fuel and Waste Code) added to PW03 Despatch Advice schema and reader
New message PW12 ConsignmentEnvironmentalReport
New view UVECOData used for expanded child view to USVDespatchRow (Eco)
USVDespatchEco and USVDespatchRowEco added as new links to show ECO related stuff in USVDespatch and USVDespatchRow
Support for BEAst version 3.1 Price Zone Code 05 (#525)

2021-05-21
DEV7183 Eliminate LESS-files and the Custom Build
Removed LESS-files and Custom Build in order to get rid of the "Custom Build"-process altogether
Added custom directory for customer adjustments of logo and css (#506)
Fixed final CSS details.

2021-05-19
Web Date picker - Added button "Today" and implemented Unicorn look & feel (#500)
Added button "Today" in Webb calendar/date picker and implemented Unicorn look & feel
Also corrected minor issue "Date field time is not propagated to the calendar/date picker when started".
Corrected Property Value error after caching implementation.
Also added some null-exception handling in inbound order/delivery views.

2021-05-18
DEV7190 - MAComCleanup of orphaned converter logs (#498)
Converter logs could be orphaned and not cleaned by MAComCleanup background job. This issue has now been resolved.
Also made separate script for the upgrade process.

2021-05-18
Update of version string displayed to users (#497)
Removed SP and added Build to string and updated the format from 0.0.0 to only showing the build number since we are not using the other two digits.

2021-05-18
Added CS55 to schema, but no implementation. (#495)

2021-05-12
DEV7148 Add order line information to mail patch from 20.1 (#493)
Added remainder row number information to Order deviation confirmation mail and Despatch deviation mail.

2021-05-11
Fixed Tax Type not being shown for Invoice Lines when viewing an Invoice. (#491)

PipeChain Client - Performance issue (#489)

DEV7147 - CS38 Delivery Schedules transaction triggering Change Request (#487) (#488)
The CS38 Delivery Schedules transaction triggers Change Request operations despite there is no changes in the demand/order line
Selected Property 75 CHECKORDERVSDMD now used for CS38 and PW51 with new values.
Also cleaned up code in SRSelectedProperties.

Essential objects are created at first start with empty db. (#486)

2021-05-10
Update com.microsoft.sqlserver:mssql-jdbc from jre8 to jre11 (#483)

2021-05-07
DEV7052 - Analyzer Poll Transaction Conflict (#481)
The Analyzer Poll fails with a transaction conflict when handling product dimension from delivery data. Revisited this issue.

Rental Reports invoices can now also be set to paid in the Rental Report History view (#480)

CS38/PW51 Delivery Schedule status and mail issues (#477)
Corrected the following issues:
1) MP01 Purchase Order Change mail is not created for all cases of order change.

2) MP01 Order Change and Forecast Notification mail created by CS38/PW51 is not logged.
3) Order status Change requested is reset when new CS38/PW51 arrives without changes.
4) Partially received orders is not updated with new dmd reception time.

Also did a cleanup in Selected property code and documentation.

2021-05-05
CS43 processing will now properly update TimeZoneId, VATType and VATNo (#475)

2021-05-04
PipeChain Client - Selected Properties screen can save views. (#470)
Also improved the handling of wide columns

2021-05-04
CS02 processed with errors (#469)
CS02 ends up with status Processed Error with the error message "Could not fetch PurchaseOrderId from document".
Added checks of DelivNoteId and PipeChainOrderId, to make sure we don't try to fetch them when they are not present.

2021-05-03
Code cleanup (#468)
- Removed obsolete rmi .bat files
- Add missing Override annotations
- Removed redundant javadoc inheritDoc annotations
- Removed redundant // end comments from DB Wizard templates

Completely Shipped flag not correctly set (#466)
This solves the issues where there is nothing left on the order line to ship, but despite that, the line is not marked as completely shipped. Automated this process: i.e., when the quantity Not Yet Shipped Qty is set to 0 (or below) the order line's flag Completely Shipped is automatically set to true.

2021-04-30
Reception Schedule Overview - Reception Days display (#464)
Fixed Reception Days display to match TransportList.WEEKLY when Reception Days not used.

2021-04-29
Show Delivery Agreement Analyze remarks (#462)
Delivery Agreement Analyze remarks are now shown when hovering over Agreement Status in Delivery Agreement overview in the web client.

2021-04-29
Fix .jnlp file to work with javaws (#461)

2021-04-29
Fix broken RMI lookup path for cached Java Web Start (#453) (#454)

2021-04-28
Added refresh of parent view (#455) (#457)
Added refresh of the parent view when confirming order.

2021-04-27
Fix RMI lookup path for cached Java Web Start files (#450) (#452)

Fix invalid branch name during deploy action (#451)

Removed LESS + build-scripts (#448)
Removed LESS + build-scripts, modified login & menu + added 2021 modernize CSS.
Also added Google Analytics.

Split order line handling (#447)
In some cases the split order lines are stored in wrong order in the database which leads to the same line (the one with '_<number>') is read twice instead of each line being read once. This was solved by ordering the lines in the database before handling the lines.

2021-04-26
EV6317 Adding more calendars to Receptions Schedule (#335) **(#354)** (#446)
- Addressed issue with new common receipt calendar
- Adding time zone to pick-up points calendar, addition to CR 3

2021-04-23
CS03 Inbound Despatch Advice crash on empty DespatchAdvice element (#442)
Processing a CS03 with an empty DespatchAdvice element will no longer generate a null error

Release 211 CC adjustments and new new Java WebStart view. (#571)(#573)
- Adjusted new look of site picker to work with Edge, Chrome, Firefox, Explorer and Safari.
- CSS adjustments for various screen sizes. Modal header color aligned with color palette.
- Adjustments to modal header and various screen sizes.

2021-04-22
DEV7026 - Widen the scope for Undo Delivery Precision Error (#438)

PC30503 PipeChain show DP error on VMR parts + missing null test for Vessel and Container (#433)

Calendar Chinese language support restored & Calendar Advanced search working in scrollable table (#431) (#437)
- Calendar Advanced search working in scrollable table
- Removed duplicate element ids from cloned scrollable tables
- Added Calendar support support for Chinese characters
- Added Calendar support for TimeZone summer variants

Added a link to the Supplier view under the Settings menu (#435)

2021-04-19
Outbound – Inbound CS80 Invoice transaction has empty supplier id #432
Invoices from an outbound principal were not processed correctly in the receiver's client. An empty Supplier Id was copied from CS80 to PW80. This is now changed, if SupplierId is empty it's fetched from database instead.

2021-04-16
Username changed to username on the login view for the web client. (#429)

2021-04-14
Enable Java Web Start cache (#423)

2021-04-09
DEV7040 PART 4 Improvements in Transaction Overview - Improve logging in transactions
Patch of solution originally added in 19.1.
Improved MACom Filter, including Purch & Sales Order (#407) (#409) (#565)
Expanded web screen with more and new fields

2021-04-08
DEV7152 - Product Price Agreement Price Improvements
Show previous price and who accepted the new price in RentalReport (#417)

Partially Shipped delivery get incorrect status after CS02 order response (#416)
A Partially Shipped delivery does not get correct status when order response is received that confirms quantity that has been shipped.

2021-04-07
Rental Report Planned End Date Remark (#415)
Rental Report Planned End Date field will now turn yellow when within one week of Report Date and turn red when Report Date has passed.

2021-04-01
VMI calculations yields suggestion that that puts the product (bucket) under the safety balance (#411)

2021-03-30
DEV7111B - Fixed Time Stamps Selector not working in Forecast views (#403)

2021-03-26
DEV7104 - Update All Reception Schedules i LoadPlannern orsakar TimeOut (correction) (#400)

2021-03-26

Order printout with order status (#399)

2021-03-26
Clone Supplier Price to Project Price failed when changing PriceZoneCode (#398)

2021-03-25
Transaction CS03 Despatch Advice does not pick deliveries to ship according to status (#397)
When using a partial delivery key, as customer+product, the transaction reader algorithm can choose to ship suggestions, which are not allowed to ship, even when confirmed deliveries are present.

Updated supported browser version check script

2021-03-24
Added plugin views to Customer/Product menu as standard views for own/customer users in the web client. (#394) (#395)
Added views:
- UVCustProdNodeConsumptionReport
- UVCustProcedureReport
- UVCustProdNodeStockTakingReport

Under Customer menu for own users. Under Product menu for customer users.

2021-03-23
New Date format in Java 11 are incompatible with Date Picker (#390) (#391)
The Web Date Picker was upgraded to handle Java 11 Date formats.
Do note that the following languages are not supported by the picker:
- France/Canadian
- Chinese
- Bangla (Indian)

Background Job "Notification Mail Sender" will no longer fail to run because of bad date format. (#388) (#389)

2021-03-22
CS10 + CS15 Partner Product Id #387
CS10 transactions to update Delivery Agreement can now be processed without Product Id by using Supplier/Customer Product Id instead. Added SupplierProduct and CustomerProduct elements to CS15 transactions and made them able to be processed without Product Id by using Supplier/Customer Product Id instead.

2021-03-18
Fixed Mail Channels going into Error in Overview. (#385)

DEV7182 - applied fix for date formats with comma as date-time delimiter (#384)

2021-03-17
Session Selected Property cache cannot be trusted (#381) (#382)
Initialize and use session **Selected Property cache** in order and ship screens

2021-03-17
Web Shop Basket Line - Date Picker on column for Shipment Time (#379)

2021-03-16
Fixed bugs with Mail Conversation. (#378)

PW03 Inbound Despatch Advice order line status not updated
If PW03 arrives after CS06, IsLastShipment==true and delivered quantity is the same as the shipped quantity in PW03, the status should be updated to Received to avoid having status Partially received forever. (#377)

2021-03-15
Added Waybill grid to Mail Conversations

Fixed bugs with Rental Reports.

Added MaxAmount attribute to CS80 <InvoiceFee> and PR80 <Fee> elements.
Value taken from Setting of Property Value 1310.

2021-03-12
Use latest Java LTS (Java 11) (#373)
It's recommended to use LTS versions in production. Thus, we'll use Java 11 instead of Java 14.

2021-03-11
Added field in E-mail channels for inputting file name for attachments in e-mails. (#369) (#372)

DEV7174 - Deviation Information, Confirm and Reconfirm issues (#371)
- Corrected order status selection for Re/Confirm views
- Despatch Mandatory Deviation logic does not work

2021-03-09
Updated org.mnode.ical4j version to remove groovy problems (#364)
Updated org.mnode.ical4j to avoid having (old) groovy version using JDK internal classes.

PW05 OrderResponse OrderLine/EdiStatus added to versions FROM 4.9.5 instead of ONLY 4.9.5 (#362)

2021-03-08

Background job should not move orders in status change requested to finished (#359)

Added check on cancelled orders if they have Order Status = Change Requested. Then the background job FinishOrder will not move those to status finished.

2021-03-04

DEV7173 - Cannot browse Product Groups in any report screen (#358)

Improved mail conversation handling for Rental Reports. (#357)

PW03 Despatch Advice DmdPrice is not set to correct price (#356)

Applies to BEAst OrderReceipt scenario when new Order Line is created from PW03

2021-03-03

Change Vessel CR Database and Script for 2021 (#355)

- BO, Table, Rec and other classes for the interface, plus PASS_08 and PASS_09 script files. Also corrected non-reentrant and erroneous logging in PASS_07 script (unrelated development)
- Change Vessel CR - Columns Vessel & Port ETA added to grid for InDeliv (#443)
- New functions Change Vessel & Change Container in ScrInDeliv (#360)

Issue with new common receipt calendar (#354)

Update resources on frame deactivation in Tomcat run configuration (#352)

2021-03-01

Corrected PipelineTableCollection for PC6350 and PC32406 Outbound order detail error (#350)

2021-02-26

Outbound Package-in-Package support

Support for Despatch Advice Outer and Inner Package (#347)
Added functionality for DespatchPackageSequence (1 level) to CS03 and PW48 Outbound Despatch Advice

2021-02-25

- Partnerselector performance issues (#340)
- Added webapp custom catalogue to .gitignore file
- Partnerselector performance issues - loop-in-loop problems (#339)
- Additional corrections and changes in views

2021-02-24

Fixed Javascript files not being loaded in properly in the web client login view. (#338)

DEV7156 - Changing Cost Account Buxfix. (#337)
Changing Cost Account in Delivery Agreement should override supplier's input. (#337)

Customer Product View - SMI Filter and Selected Properties 6003 and 10031 (#334) (#336)

DEV7115 – Flow model Fixed Quantity, reimplementation (#193) (#333)

DEV7126 - User installation instructions regarding JRE14 and OpenWebStart (#331)

2021-02-23
DEV7128 - Rental, adjustments after test (#329)

Included Captcha keys as environment variables when building releases. (#328)

DEV7068 Reset password 5) Change Password (#327)
Added check for if new password has been part of a data breach before.
Mail is now sent to user when password is changed for that user.

2021-02-22
Removed unused webapp folders: frontend, markup and svg (#325) (#326)

2021-02-19
Split Order Line in Ship Despatch dialog resulted in Transaction Conflict. (#321)
Also removed Selected property 85 ALLOWSELECTLINESTOCONFIRM check in this scenario.

2021-02-18
Update Despatch: Shipped qty on despatch row is set to 0 when updating despatch (#318)

Odd number of digits cannot be printed when using Barcode type 128C (#313) (#315)
Barcode type 128C requires an even number of digits to be printed. Odd number is now padded with a leading 0.

2021-02-17
DEV6350 TransactionInfo Cleanup
Orphaned records in the TransactionInfo table were not removed by the MACom cleanup night job.
Script for handling of the issue was included

Conditions for shipping and signaling of late shipments in Monitor view (#309) (#310)

Added Selected Property #1577 ALLOWSELECTLINESTOCONFIRM (#308)
Controls whether CS50 daily demands are grouped by date (Deliv Time) or not.

DEV7068 Reset password 4) Forgot Username (#307)

Copied Order Spec LT from original row on split (#305) (#306)
Added Order Spec LT (transport lead time) from the original row when splitting rows.

2021-02-15
DEV7153 – "Planned End Date" in Rental Report (#299)
- Added new column "Planned End Date" to Rental Report grid
- Added Selected Property for setting margin between Report Date and Planned End Date.

DEV7152 - Product Price Agreement: Show price accepter (#298)
- Show previous price and who accepted the new price in Receive Waybill
- New fields in table DelivAgrmtPriceRange: PrevPrice and AcceptPriceUserName

2021-02-12
DEV7133 - Order Confirmation Deviation mail - Change MS02 creation (#291) (#296)
Added check of incoming values. If identical to last confirmation deviation parameters, no MS02 will be sent.

2021-02-11
Selected Property 10008 controls allowed set of characters for order line id in basket (#292)

DEV7155 - Support for reporting deviations on several lines in the Rental Report view

DEV7156 - Changing Cost Account in Delivery Agreement override (#286)
Changing Cost Account in Delivery Agreement should override supplier's input. Applies to Order Receipt and Rental Reports for construction. Controlled by Selected Property 1575 USE_COSTACCOUNT_FROM_DELIVAGRMT, default false.

2021-02-10
Hanging Data Exchange jobs are now detected and terminated (#285)

DEV7128 Rental Development
Show Activity Summary divided per Cost Account in RentalReport and RentalReportHistory
Cost Activity/Account Summary dialog child rows should apply to entered search conditions (#314)
Show Activity Summary divided per Account in DespatchInvoicer
Add possibility to filter Rental History rows on New and Changed
Visa Aktivitetssummering f├Âr respektive Konto i Kontosummering i DepatchInvoicer.

2021-02-08
Monitor Supplier / Orders to Confirm now counts all confirmable orders. (#281) (#282)

2021-02-05
DEV7027 Correction: Cannot print transportunitlabel from despatch overview (#129) (#280)
It is possible setup the application to print different transportunitlabel according to order type (delivssubtypelabels). There was a problem with multiple orders in joint despatches.
Also added DelivSubTypeLabel to Despatch Detail screen

Web Client - No scroll view returns maximum of 1001 lines
Screens without fill-data-as-you-scroll function returns a maximum of 1001 lines. Corrected to 1000 lines.

2021-02-05
DEV7068 Reset password 3) Forgot/Reset Password - Improved "Forgot my Password" function (#278)

2021-02-04
Add External TMS in BookingServiceProviderT (#276) (#277)

2021-02-03
Show DelivSubType in All Order Lines (#274)
Added possibility to add DelivSubType (SubOrderType) as a column (Hidden by default) in All Order Lines (and InDeliv) screen.

2021-02-01
Single line Order Generation Strategy creates multiple lines (#271)
Setting Delivery Suggestion Parameter "Order Generation Strategy" to "Single Line" will now actually create one order per order line.

Fix default .xsl file paths for xml_to_html and xml_to_xml (#270)

Barcode on Kanban/Transportunitlabels prints the same barcode for all (#268)
Added the labelnbr to the file name of barcode to get a unique barcode for each label.

2021-01-29
DEV6374 - Performance in MACom transaction readers
An optimization was made in the MACom processor, reducing the number of reads in the very large MAComTrans table. This can have a great impact on the throughput of large transactions containing hundreds, thousands or even tens of thousands of fragments.

Waybill Activity Description editable(#225) (#260)
Accepting a new activity in a waybill will now also let you input a description to the new activity

Updated Analyzer OLAP instruction (only) (#244) (#248)

2021-01-28
Corrected Site Group Filtering for the Monitor Supplier View (#257)

DEV7111 Handle Forecast screens without Lead Time
Selected property 7004 FCT_PERIOD_DATE_SELECTION has two new values (total of 5) and a new default value (0). Forecast screens will show Time Stamp Type based on selected property 7004 if not changed by the user.

Fixed CS40 Purchase Order transaction reader transaction conflict loop error (#251)

2021-01-27
DEV7102 - Monitor Supplier. Conditions for Orders and Deliveries to Ship have been updated (#247)

Add analyzer .sql files (#245)

Fixed Sidebar expand/collapse button icon (#242)

DEV7141 - Add new value of "hide" to Selected Property 1390 UseRoundOff (#239)

2021-01-25
Lacking performance in Order Overview to Order Detail (#236) (#237)
- Removed orderclause in PipelineSeverity SQL for 21% shorter execution time
- SQL Time Limit for logging in scrollable/chunkable cursor is now a server property (se.masystem.pipeline.server.dbsqltimeloglimit)
- Browse records is now govern by servlet property pipechain.useBrowseRecords
- Include libs in .war file (#233) (#234)

2021-01-22
Improvements to Push Notifications and also added descriptions in User Settings view (#232)

2021-01-21
Monitor Orders to Confirm - Updated to match Order screen. (#226) (#227)

2021-01-19
Reapplied changes that were lost from commit bf336ecb9c3ab00c751f6429148576c61fe0c71c (#221)

Update release distribution structure to map to server, webapp and jws (#210) (#219)

DEV7088 - Save order confirmation data to Analyzer (step 2, 21.1 solution) (#218)

CS80 Invoices transaction crashes (#200)
On some error in the transaction file, the CS80 Invoices crashes with "null" as only error message. The error was in the error handling – the transaction now shows a proper error message when any of these error occurs.

PC31623 Supplier cannot confirm without getting deviation error prompt (#199)
Corrected mandatory deviation logic , i.e. when the setup of Selected Property 1561 USEORDERLINECONFINFORMATION is 5 = Mandatory for all deviations.

Coded Value bundle and Picker changes (#214)
- In list pickers, using the arrow keys to select rows no longer changes search text. Enter key can now be used either search or select a row, depending on last action.
- Coded Values will now get default translation if they are not included in an existing central bundle file.

2021-01-18
Reverted Desktop and Web favorite icons to the old one. (#212)

2021-01-15
DEV7088 - Save order confirmation data to Analyzer (#211)
Today, order poll only searches for Finished Orders, with HistoryChanged flag set. A finished order may be updated in Analyzer if HistoryChanged is set again. Today, order poll does not search for unfinished (active) orders, and these tables do not have any HistoryChanged flag.
Change made
- Add a HistoryChanged flag to active order tables.
- Add search for active orders.
- Restrict search to confirmed active orders

Erroneous Product Id not handled as minor error (#209)

Despatch view: Advanced Search on Forwarding Agent not working (#206)

2021-01-14
Performance boost for Inbound Order view. (#203) (#205)

PC31286 - Correction on logic for when an order is pending approval
An order is pending approval if any of the lines are pending approval. This logic had a glitch, which is now remedied.

2021-01-13
DEV7116 - Corrected Analyzer Poll error (#197) (#198)
Saving products in analyzer poll background jobs logs an error. This is due to a mismatch of the number of parameters in some instances.

Added Property Values view to web client. (#196)

PC30801 – Percentages are truncated erroneously
When suppliers share the replenishment of a bucket, decimal percentages were not correctly rounded when calculating the check that the sum was 100%. This prevented saving in the delivery agreement screen.

CS38 Delivery Schedules transaction - Reception registrations mismatched
Reception Registrations are registered using minutes. It could happen that reception registrations for the same order line and quantity could be registered at the same minute, and there is thus no way to different which reception is which.
Reception Registration is now using resolution on a second's level, instead of minutes.

Fixed error when viewing order lines in Order detail view. (#173)

Remove unused DB drivers (Oracle, IBM, SPRINTA, DataDirect and JTurbo) (#170) (#171)

2020-12-15
Fixed attachment links in All Order Lines view not appearing. (#165) (#166)

2020-12-14
Documents Attachment link has the same base file root for all documents.
Selected Property 1061 EXTERNAL_ATTACHMENT_FILE_ROOT can in fact be setup to have different file roots for different site. This property was only read once when viewing document links in the web client, which caused faulty links in some instances. (#162) (#163)

2020-12-03
Remove unused tools (#149)
- Service starter tools have been replaced with Procrun
- BMQ is not used anymore

PW80/PW80 Invoice transaction faulty information about Supplier and PayToSupplier
When the information is sent out with basis on an oncoming CS80 Invoice transaction, the Supplier and PayToSupplier element could sometimes be empty. CS80/PW80 will now try to copy values from incoming CS80.

2020-12-02
Include all modules in JRE (#141) (#143)

PipeChain Client - Sorting in Customer screen (#142)

2020-12-01
DEV7068 Reset password 2) Added Google reCAPTCHA to login page (#128)
- Cleanup of captcha code.
- Secret Key is now read from a separate properties file. The property gets its value from an environment variable when building the project.
- Google reCAPTCHA Site Key is now also read from the separate property file.

2020-11-27
DEV7066 - Webshop/Deskframe corrections
Cannot save outbound delivery agreement - issue corrected

Added missing .sql files for release distribution (#123) (#132)

2020-11-26
Added DelivSubTypeLabel Name to views (#131)
DelivSubTypeLabel setting Name is displayed in Invoice, Inbound Order, Ship and Despatch views

2020-11-25
DEV7027 Support of printout of transportunitlabel for different sub order types (#129) (#130)
Feature to printout seperate transportunitlabel for different sub order types (delivssubtypelabels) according to joint despatch in despatch screen

2020-11-23
DEV7066 - WebShop/Deskframe improvements
- Enter Shp/Rcp time when copying Template to Basket
- Category description is displayed in tree tooltip. (#127)
- Category displayed in Basket Line is one that the Customer has access to. (#124)
- Add links to the 'Documents' panel (#139)
- Added Call-off to the list of selectabels Production Ordering items. Also change the display name of the different types in SubOrderTypeBundle, i.e. what is shown to the user the selection options list.
- Added DocGrpId to some WebShop tables
- WebShop images improved. What images to display is controlled by Selected Property 10041.
- The 'Match Basket' button is controlled by Selected Property 10042.
- PipeChain Client's Catalogue screen now contains a button to remove category images. (#158) (#159)

2020-11-19
USVProductPriceAgrmt Send Delivery Agreement button not working: (#119)
- Updated function to send CS44 Partner Agreement instead
- Added user feedback to action

2020-11-18
Fields in Change Password dialog can no longer be hidden (#116)

2020-11-18
DEV7091 Web Client Supplier Configuration part A
- Added missing fields to economics part of supplier view.
- Added new fields to the new/copy supplier dialog
- Updated new/copy supplier dialog, changed copy/delete functionality (#114)
- Changed copy of supplier to include the new fields.
- Connected partner agreements will now also be deleted when deleting the supplier.

2020-11-16
Added delays and logging for FTP (#108)
- Added delay between some FTP commands to make sure "451 Another command is currently pending" error doesn't happen.
- Added more logging to FTP sender.

2020-11-11
Fix for deprecated GitHub Action set-env (#107)

2020-11-04
UnicodeDisplayer Bugfix and warning cleanup (#103)

DEV6326 Introduced logging for opening and closing DB connections (#102)

2020-11-02
PC29316 Pending approval orders is not visible for super users in inbound order view (#99)

Error in invoice matching for BYGG (#98)
Transaction conflict occurs when trying to update deliveries. This issue has been resolved
